

SEARCH ENGINE OPTIMIZATION (SEO)

Professor Kartik Hosanagar

Search Engine Optimization/Marketing (SEO/SEM)

Search results consist of both organic and sponsored results. SEO focuses on placement among organic results and SEM among sponsored links

Organic Search results →

The screenshot shows a Google search for 'porsche' in Microsoft Internet Explorer. The search results are displayed in two columns. The left column contains organic search results, including links to 'Don Rosen Imports', the 'Official Porsche Website', and a Wikipedia entry. The right column contains sponsored links, including 'Lotus Cars', 'Brandywine Porsche Sales', 'Visit Len Stoler Porsche', and 'Research Porsche Cars'. An arrow points from the text 'Organic Search results' to the organic results section. Another arrow points from the text 'Sponsored ads' to the sponsored links section.

How Search Engines Work

Search engines perform three main functions:

- i. Gather all pages on the web (**crawling** or **spidering**)
- ii. Organize the contents of the pages to allow easy lookup (**indexing**)
- iii. In response to a query, determine which pages match, and rank order them (**ranking** and **display**)

Core Elements of SEO: Crawling

- Ensure all your pages are crawled by search engines
 - Maintain a [sitemap](#) that makes it easy for search engines to discover all your pages
 - Dynamic content should also be indexed so add them to sitemap or create static versions for indexing

Sample sitemap (source: Wikipedia)

Core Elements of SEO: Indexing

Ensure your website is indexed for the “right” kinds of keywords

- Index records the pages that are relevant for any given keyword
 - Keywords are words/phrases that represent the content of a webpage
- Mention important keywords prominently on your website
 - There are several free keyword tools that provide information on search volume and competition for each keyword (e.g. Google’s AdWords keyword planner)

Keyword (by relevance)		Avg. monthly searches [?]	Competition [?]
florists		22,200	High
wedding florist		2,400	Medium
wedding florists		880	Medium
find a florist		260	Medium
enchanted florist		2,900	Low
cheap florist		480	High

Keyword planning (source: Adwords keyword planner)

Core Elements of SEO: Ranking

Ranking depends on keyword appearance and inlinks to your website

- The number and quality of “inlinks” into a webpage indicates how authoritative is that page
 - Try to ensure lots of high-quality links into your website
 - Black hat techniques rarely work because search engines prioritize links from high quality pages

Google PageRank. Note how Page C has a high score (34.3%) because it gets an inlink from an authoritative website unless website E whose score is lower (8.1%) on account of lots of links from poor quality websites (source: Wikipedia)

Role of Blogs

- Primary purpose of blogs is to provide timely information to customers, establish thought leadership, etc
- Blogs can be useful with SEO
 - By offering more content, you will be indexed for more search queries
